Background

A rare triad — trained in the clinic, schooled in the economics, and I build the product myself, so strategy, money and delivery actually connect. Across healthcare, real-estate development, education and investment.

Clinical

MSc & BSc Rehabilitation
Medicine and a decade
inside clinical operations — I
know how care is actually
delivered.

Business

MBA Frankfurt (Distinction),
MSc Health Economics
(LSE), incoming EMBA
TRIUM (NYU Stern / LSE /

Builder

I spec and ship the software
myself — financial models
and operating platforms, AI-
augmented, in production.

HEC) — investment-grade rigor.

01 Selected work

An operator who specs and ships real software — built AI-augmented — so operations and investment decisions become measurable. Figures and internal content are masked for confidentiality.

INVESTMENT ANALYTICS · WEB APPLICATION

Board-grade financial decision tool

UAE multi-year medical investment project — as Director of Special Projects, QUBE Development

CHALLENGE

The board needed a defensible go/no-go on a multi-year clinic investment — not a static spreadsheet only one person could read.

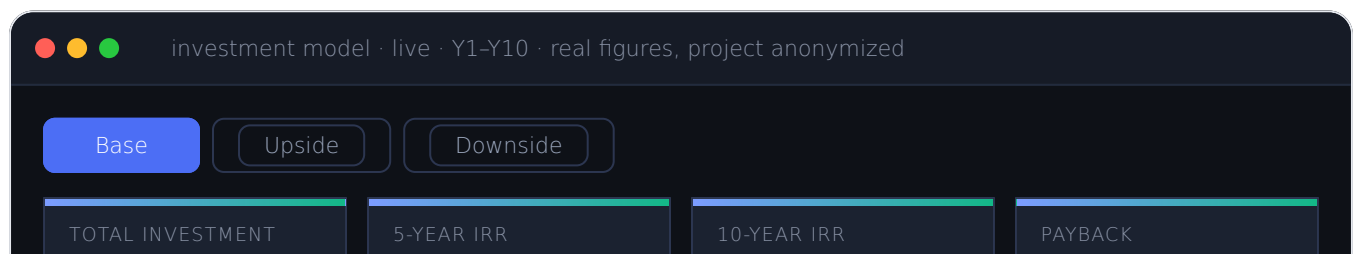

WHAT I BUILT

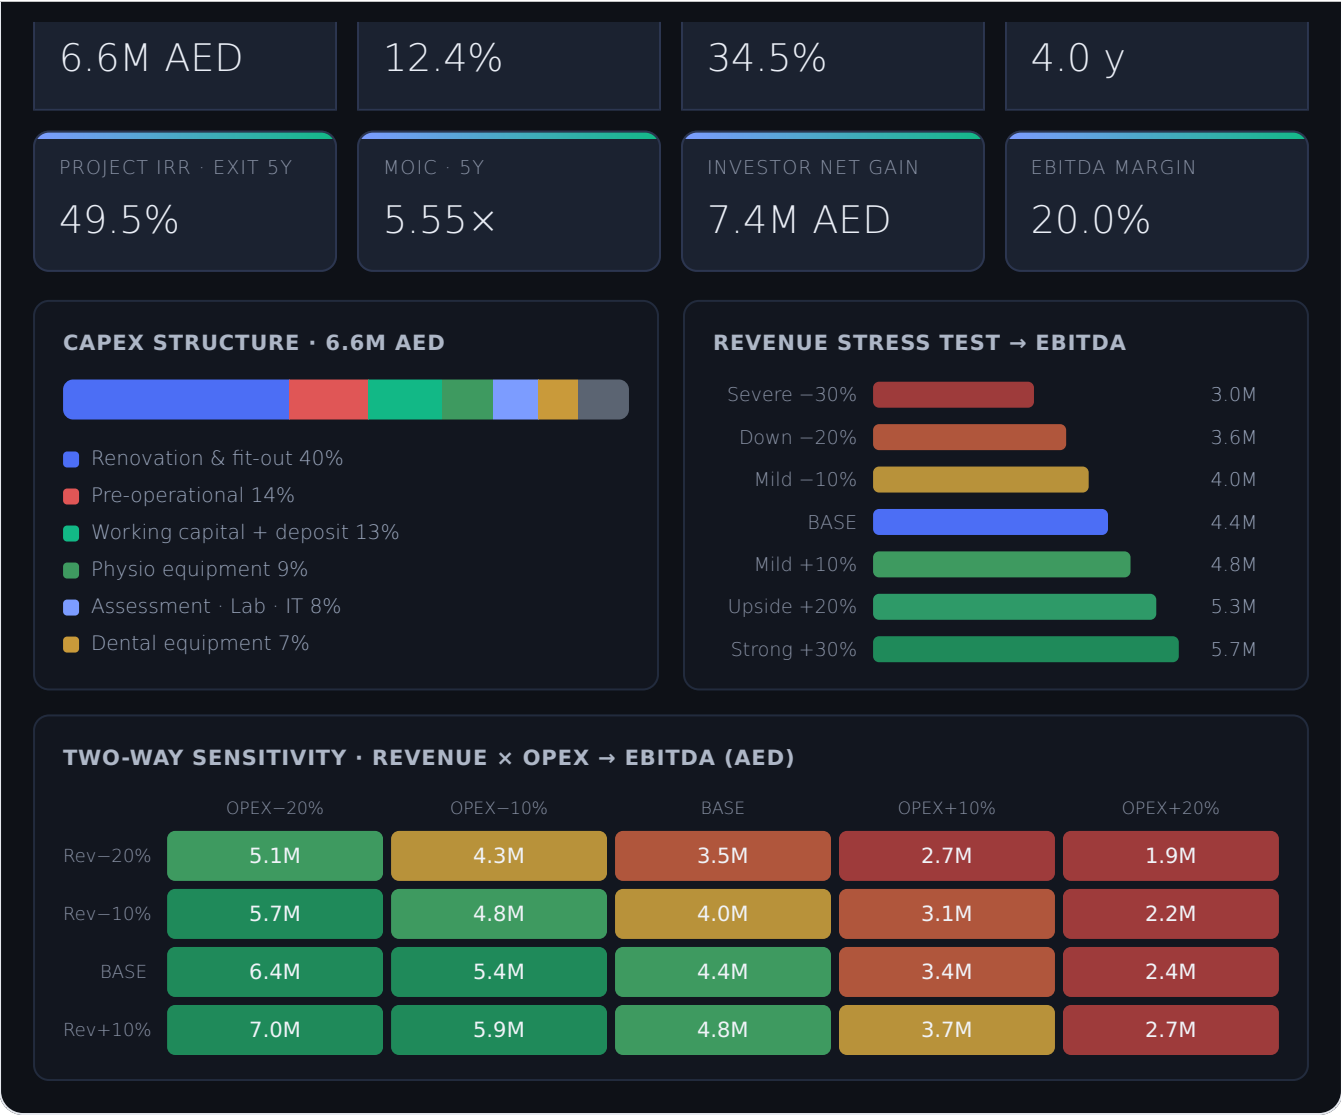

A live parametric model turned into an interactive web app: a six-driver scenario engine (Base / Upside / Downside), live NPV / IRR / MOIC / payback, Monte-Carlo simulation, DCF waterfall, tornado and two-way sensitivity, investor-vs-founder return models, Excel ingestion, EN/RU and PDF export — productizing a multi-thousand-formula model.

IMPACT

A spreadsheet became a board-grade decision tool: any scenario answered in seconds, assumptions transparent, capital allocation defensible.

Below — the model for a single greenfield clinic (~AED 6.6M): one asset inside the broader AED 240M+ development portfolio I structured. The same rigor scales from one project to the whole book.

OPERATING SYSTEM · FULL PLATFORM

Clinic operations & governance platform

Premium DHA-regulated dental clinic, Dubai — as CEO

CHALLENGE

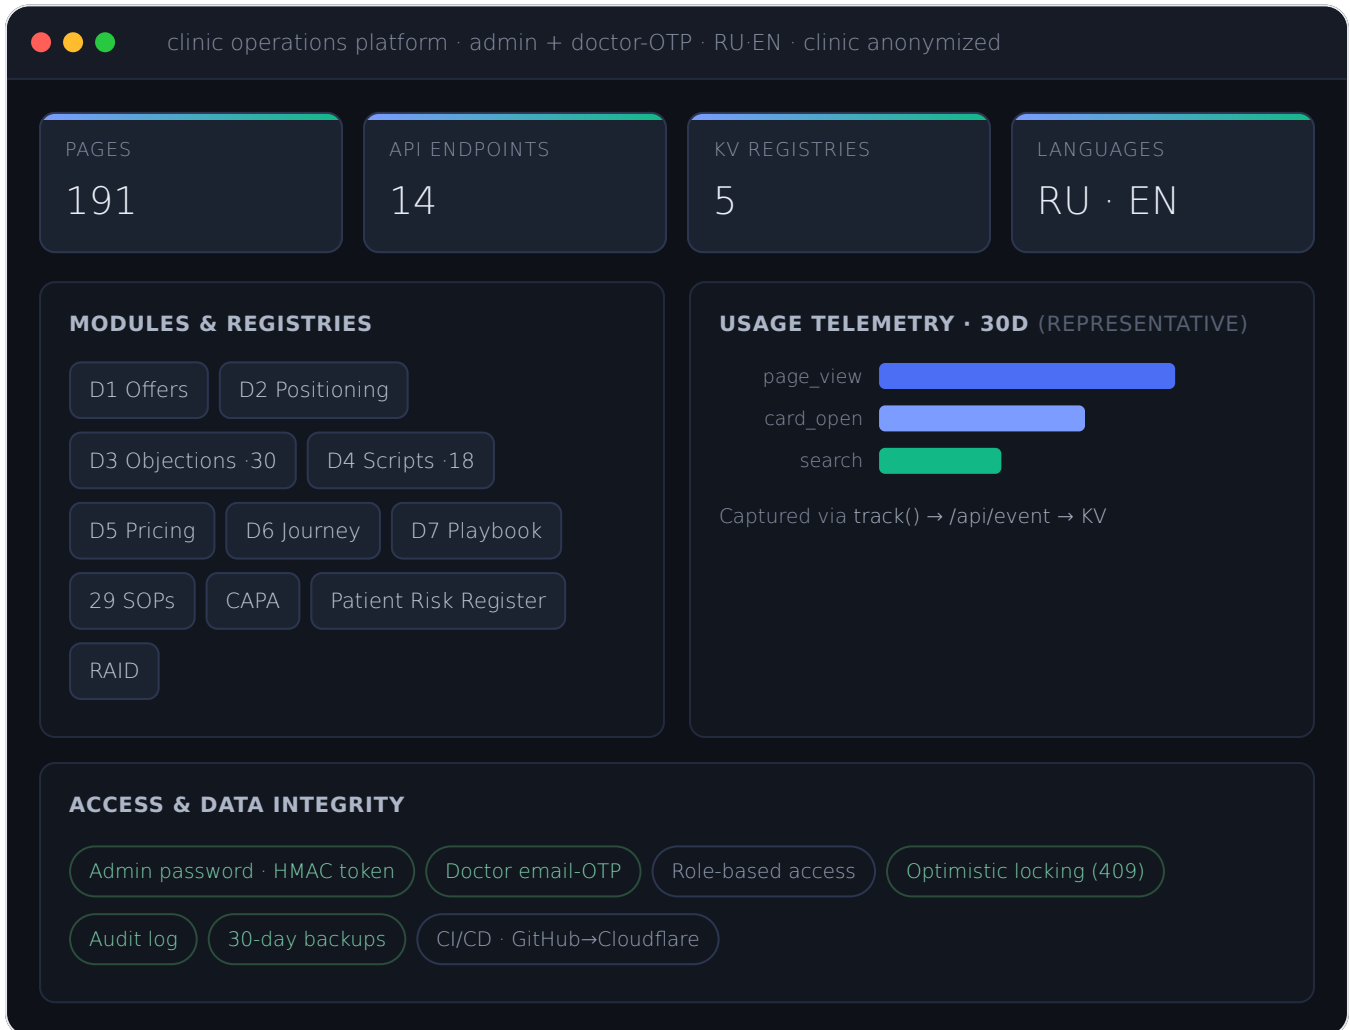

Scaling a regulated clinic meant governance, quality, sales and operations lived in scattered documents — no single, access-controlled source of truth.

WHAT I BUILT

A 190+ page internal platform on a custom engine: sales-enablement system, 29 SOPs, CAPA / quality, patient-risk and RAID registers, complaint-case workflows — fully bilingual RU/EN.

ENGINEERING

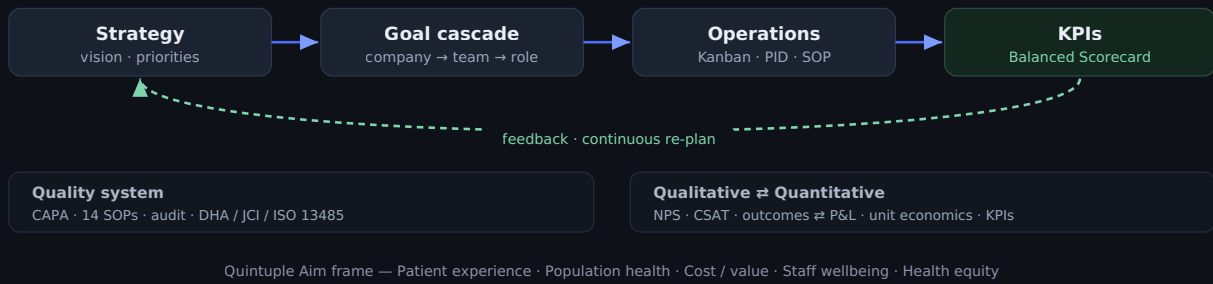

Edge-middleware auth (HMAC-signed token cookies) plus email one-time-code login for clinicians; 14 serverless API endpoints; a key-value data layer with optimistic locking, audit trail and automatic backups; usage telemetry; CI/CD from GitHub to Cloudflare.

OPERATING MODEL

One system keeping strategy, operations, quality and the numbers in sync: a goal cascade from strategy to the floor, a Balanced Scorecard across the Quintuple Aim, and qualitative signals (NPS, CSAT) tied to the quantitative (P&L, KPIs) — with a feedback loop that turns results back into re-planning.

Operating model — strategy ↔ operations ↔ quality, in sync

Edge auth / OTP

Serverless API

OPERATIONAL TRANSFORMATION

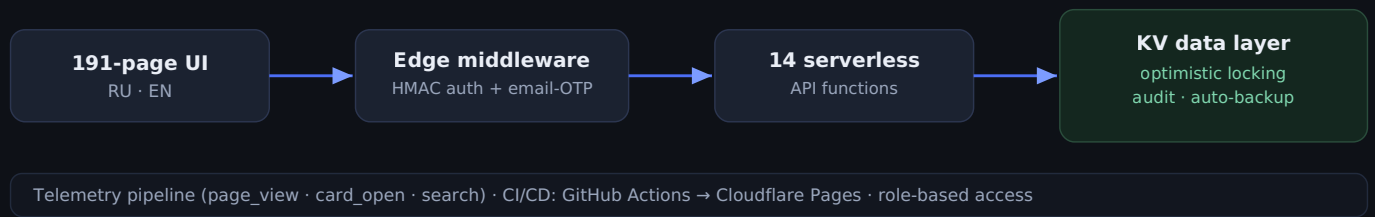

From ad-hoc to audit-ready

Beyond the software: I built the governance and quality backbone — a 31-KPI scorecard and CAPA methodology — that put the clinic on a JCI-accreditation pathway and made operations measurable and audit-ready.

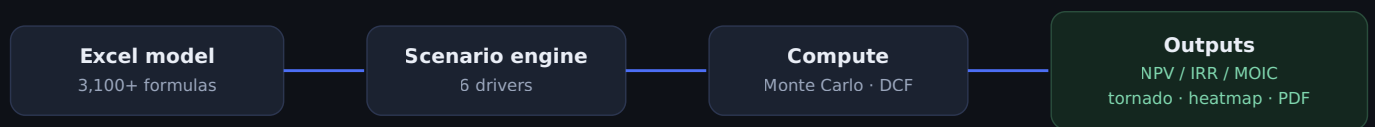

02 Inside the build

How the systems are actually wired — architecture, not screenshots, so nothing confidential is exposed.

Clinic operations platform — architecture

Investment analytics tool — data flow

03 How I work

Operator first

P&L ownership, unit economics and multi-site operations across the UAE, Europe and CIS — I run the business, not just advise it.

Investment-grade thinking

Feasibility, financial models, M&A and JV structuring — business cases a board can act on.

Builds the system

Governance, KPI scorecards, SOPs and the digital tooling that makes growth repeatable and measurable.

Ships software, AI-augmented

As a non-engineer I spec and deploy real applications — edge auth, serverless APIs, data layers — using AI-assisted development.

THE REAL PRODUCT

Transparency & alignment.

Every model, dashboard and platform I build becomes the **shared source of truth where stakeholders coordinate** — strategy cascades down into budgets and action, results flow back up. Built by an operator, AI-augmented, in production.

Marketing

Strategy → budget, campaigns, content — one view for the marketer, SMM and agencies.

Finance

Budget control, ROI & payback, scenario forecasts — for leadership, board and investors.

Clinical & ops

Quality, KPIs and risk — doctors and operations on the same page.
